

Press release

Kappa Data expands its cybersecurity offer with DNS Security for Companies and Institutions

De Pinte, June 16, 2023

Kappa Data, a leading network and security solutions distributor, announced a strategic partnership with Whalebone, a front-runner in cyber defense. With the addition of Whalebone, Kappa Data will help its customers prevent hard-to-detect threats like phishing, DNS spoofing, DNS tunneling, zero day attacks and more - without installing and maintaining any software.

Advanced layer of protection with Whalebone

The integration of Whalebone's Immunity will provide Kappa Data's clients with an elevated cybersecurity structure designed to meet the escalating cyber threats of today's digital world. Whalebone Immunity enables the network managers to protect all devices in their network, without a need to install anything on their employees' devices or disrupt their workflow in any way. *"Both inside and outside the company network, our DNS resolver blocks access to malicious websites, prevents DNS-based attacks, and adds a layer of security which blocks attacks that even the best end-point antivirus programs and firewalls can't detect,"* explains Whalebone's CTO Robert Šefr.

"Joining hands with Whalebone is a significant step for us at Kappa Data. We continually strive to stay on the forefront of cybersecurity, and Whalebone's Immunity will offer our customers an advanced layer of protection in these increasingly complex times," said Patrick Casteels, Managing Partner at Kappa Data.

During recent years, companies and institutions across Europe have been targeted by a record number of cybernetic attacks. DNS security is now the frontline of an organization's security strategy.

"The team at Whalebone is thrilled to partner with Kappa Data," said Adam Wright, Channel Manager at Whalebone. *"We are happy to be a part of Kappa Group's portfolio. With a 25-year record of success and outstanding reputation across France, Benelux and Poland, we're certain Kappa Group is the right partner."*
