

JumpCloud is a US-based technology company founded in 2013. They focus on the simplification of IT management for companies world-wide.

The company has an innovative vision based on a single cloud-based directory where IT-teams can centrally manage user identities, devices and access without the need of complex IAM platforms.

Security is very important for JumpCloud, as well as scalability and ease-of use.

Because the solution is platform-independent, JumpCloud is able to support Windows, Mac and Linux machines, as well as mobile devices (IOS and Android). From an IAM perspective you can integrate with almost any existing Identity provider (such as Entra ID, Google Workspace, AWS,...), creating a single directory with users from anywhere.

- Cloud-based platform for directory services
- Centralize IAM and access control
- Offer seamless SSO, MFA and MDM experience
- Manage all devices, whether it's a Mac, a Windows PC or a Linux machine in one portal
- Offer remote-access to users
- Cloud LDAP and Cloud Radius
- Passwordless Authentication with Apple TouchID, Windows Hello or FIDO2 integration
- Conditional access for users offering a Zero Trust experience
- Help companies to offer extensive security and compliancy in terms of Identity and MDM
- Recognize Shadow IT and stop them
- Centralized and company managed password manager
