

runZero is a cybersecurity company that provides a powerful and easy-to-use asset discovery platform.

The company's core product enables organizations to discover and inventory all connected devices on their networks without needing credentials or agents.

runZero stands out with its agentless, unauthenticated scanning technology which can quickly and comprehensively identify managed,

unmanaged and rogue devices across complex environments.

By offering detailed asset information, runZero helps IT and security teams maintain complete visibility over their network and bolster their vulnerability management efforts, making it an essential tool for improving security posture and ensuring compliance.

While runZero focuses on comprehensive asset discovery, it also assists in vulnerability management by:

- Providing a complete asset inventory
- Facilitating integrations with other vulnerability scanners, cloud and virtualization services (such as AWS, GCP, Azure, VMWare,...), Endpoint Protection products, MDM tools,...
- Running custom queries: Security teams can use runZero's querying capabilities to identify assets that may be at risk based on certain criteria, such as operating systems or software versions prone to vulnerabilities.

Key Points:

- Agentless Asset Discovery
- Fast and Comprehensive Scanning
- Unmatched Device Identification
- Ease of Use
- Broad Integration Support
- Cross-network visibility
- Compliance and security posture improvement
- Ability to scan actively, passively or use API integrations to discover assets
